VOLUME 8 1987

SUBJECT INDEX

Acetylcholine, 123
  age differences
  chickens
  cholinergic synapses
  iris
[^{3}H]-Acetylcholine, 115
  age differences
  aging
  agonist binding
  antagonist binding
  brain, rats
  muscarinic receptors
Acetylcholine release, 403
  age differences
  cerebral cortex
  phosphatidylserine
ACTH-(1–24), 265
  aging
  behavioral changes
  grooming, excessive
AF64A, 139
  age differences
  cerebral blood flow
  cerebral oxygen consumption
  cholinergic hypofunction
Age changes, general, 309
  age changes, strain specific
  limb neuromuscular junctions
  transmitter release
Age changes, strain specific, 309
  age changes, general
  limb neuromuscular junctions
  transmitter release
Age differences
  acetylcholine, 123
  [^{3}H]-acetylcholine, 115
  acetylcholine release, 403
  AF64A, 139
  age-related tumors, 67
  aging, 115, 203, 319
  agonist binding, 115
  antagonist binding, 115
  amino acids, 241
  analgesia, 167
  animal models, 435
  apomorphine, 153
  auditory stimulus, 109
  brain, human, 203
  brain, phosphatidylserine administration, 501
  brain, rat, 115
  calcium, 71
  calmodulin, 131
  capillary morphometry, 271
  catecholamine levels, 233
  catecholaminergic mechanisms, 441
  cats, 253
  cerebral blood flow, 55, 139
  cerebral cortex, 403
  cerebral cortex, postcentral, 203
  cerebral cortex, precentral, 203
  cerebral lipid metabolism, 457
  cerebral oxygen consumption, 55, 139
  chickens, 123
  cholinergic hypofunction, 139
  cholinergic synapses, 123
  chronic stress, 449
  classical conditioning, 101
  compartmentalization, 131
  cyclic nucleotide metabolism, 473
  dendritic spine loss, 501
  11c-2-deoxy-D-glucose, 319
  2-deoxyglucose, 171
  dopamine levels, 67
  dopamine release, 233
  dose differences, 167
  beta-endorphin, 167
  estrous cycle, 225
  ethanol, 241
  event-related potentials, 109
  exploration, 393
  fatty acid loss, 457
  female mice, 67
  fixation effects, 71
  footshock, 167
  frontal cerebral cortex, 241
  functional recovery, 441
  GABA-mediated hemiplegia, 441
  glucose deprivation, 457
  habituation, 253
  heterogeneity, 131
  hippocampal formation, 213
  hippocampal unit activity, 101
  hippocampus, 501
  human studies, 109, 319
  hypofrontal change, 319
  immune responsiveness, 159
  inescapable shock, 449
  inferior colliculus, 171
  iris, 123
  jump test, 167
  K^+ stimulation, 147
  lactotrophic adenomas, 67
  learning capacity, 495
  lesions, motor cortex, 441
  locomotor activity, 253, 393
  memory, 101
  monkey, rhesus, 435
  morphine, 473
  muscarinic receptors, 115
  neural retina, 449
  neuromuscular junctions, 71
  neurotransmitter release, 147, 241
  noradrenergic innervation, 159
  norepinephrine release, 233
  normobaric hypoxia, 495
  P300, 109
  pain, 167
  phosphatidylserine, 403
  phospholipid derangement, 457
  pituitary tumors, 67
  plasma PRL levels, 225
  positron emission tomography, 319
  pure tone evoked metabolic responses, 171
  quantitative study, 203
  rabbits, 101
  radial maze performance, 325
  rats, male, 55
  recognition memory, 435
  replication study, 319
  resting metabolic responses, 171
  retention intervals, 325
  selective alteration, 147
  senescence, 171
  senescent brain, 271
  sex differences, 449
  sexual behavior, 153
  short-term memory, 393
  soleus muscles, 71
  spatial memory, 325
  spatial reversal learning, 253
  spleen, 159
  spontaneous alternation, 393
  sympathetic ingrowth fibers, 213
  synaptic changes, 203
  synaptic vesicle density, 71
  tubulin, 131
  ultrastructural study, 203
  underfeeding, 225
  unexpected stimuli, 109
Age-invariance, 27
  brain protein synthesis
  cell-free system
  initiation
Age-related tumors, 67
  age differences
  dopamine levels
  female mice
  lactotrophic adenomas
  pituitary tumors
Aging
  [^{3}H]-acetylcholine, 115
  ACTH-(1–24), 265
  age differences, 115, 203, 319
  agonist differences, 115
  antagonist binding, 115

  cerebral cortex, 7
  cerebral cortex, postcentral, 203
  cerebral cortex, precentral, 203
  cholinergic activity, 417
  degeneration, 35
  delayed alternation, 35
  11c-2-deoxy-D-glucose, 319
  dietary restriction, 7
  dopamine, 195
  dopamine receptors, 45, 195
  D-1 dopamine receptors, 51
  dopaminergic system, 61
  environmental enrichment, 409
  enzymatic changes, 429
  fibrous astrocytes, 1

fluphenazine, 195
grooming, excessive, 265
hippocampus, 35
histochemistry, 297
human studies, 319
hypofrontal change, 319
ion movement deficits, 329
learning and memory, 35
learning behavior, 409
longevity, 7
metabolic responses, 61
monoamine metabolism, 61
muscarinic binding, 517
muscarinic receptors, 115
nervous system, 329
neuronal loss, 7
norepinephrine content, 511
positron emission tomography, 319
quantification, 1
quantitative study, 203
quinuclidinylbenzilate, 517
rats, Fischer 344, 511
receptor density, 51
regional cerebral blood flow, 409
replication study, 319
reserpine, 61
^{3}H-SCH 23390, 51
selective influences, 517
serotonergic system, 61
spatial deficit, 35
^{3}H-spiroperidol binding, 45
strain differences, 417, 517
striatum, 51
synaptic changes, 203
thiamin deficiency, 429
ultrastructural study, 203
vitamine E deprivation, 297
Aging brain studies, 521
  Alzheimer's disease
  dendrites
  neuron numbers
  rodents/primates comparison
Agonist binding, 115
  [^{3}H]-acetylcholine
  age differences
  aging
  antagonist binding
  brain, rats
  muscarinic receptors
Albumin, 21
  Alzheimer's disease
  blood-brain barrier
  cerebrospinal fluid
  human studies
  immunoglobulin G
Alzheimer's brain tissue, 249
  astrocyte mitogenic activity
  human brain extracts
Alzheimer's disease
  aging brain studies, 521
  albumin, 21
  amino acids, 487
  blood-brain barrier, 21
  brain, aged monkey, 291
  cerebrospinal fluid, 21
  dendrites, 521
  hippocampal cation shifts, 487
  human studies, 21
  immunoglobulin G, 21
  neuron numbers, 521
  rodents/primates comparison, 521
  senile plaques, 291
Amino acids
  age differences, 241
  Alzheimer's disease, 487
  ethanol, 241
  frontal cerebral cortex, 241
  hippocampal cation shifts, 487
  neurotransmitter release, 241
Analgesia, 167
  age differences
  dose differences
  beta-endorphin
  footshock
  jump test
  pain
Animal models, 435
  age differences
  monkey, rhesus
  recognition memory
Antagonist binding, 115
  [^{3}H]-acetylcholine
  age differences
  aging
  agonist binding
  brain, rats
  muscarinic receptors
Apomorphine, 153
  age differences
  sexual behavior
Apparatus
  radial maze, 325
  Stone maze, 409
Area 17, 7
  aging
  cerebral cortex
  dietary restriction
  longevity
  neuronal loss
Astrocyte mitogenic activity, 249
  Alzheimer's brain tissue
  human brain extracts
Auditory stimulus, 109
  age differences
  event-related potentials
  human studies
  P300
  unexpected stimuli

Behavioral changes
  ACTH-(1–24), 265
  aging, 265, 429
  enzymatic changes, 429
  grooming, excessive, 265
  thiamine deficiency, 429
Behavioral effects, 297
  aging
  histochemistry
  vitamin E deprivation
Blood-brain barrier, 21
  albumin
  Alzheimer's disease

  aging, 1, 195, 203
  cerebral cortex, postcentral, 203
  cerebral cortex, precentral, 203
  dopamine, 195
  dopamine receptors, 195
  fibrous astrocytes, 1
  fluphenazine, 195
  quantification, 1
  quantitative study, 203
  synaptic changes, 203
  ultrastructural study, 203
Brain, monkey, 45
  aging
  caudate nucleus
  caudate putamen
  dopamine receptors
  ^{3}H-spiroperidol binding
Brain phosphatidylserine administration, 501
  age differences
  dendritic spine loss
  hippocampus
Brain protein synthesis, 27
  age-invariance
  cell-free system
  initiation
Brain, rat, 115
  [^{3}H]-acetylcholine
  age differences

aging
agonist binding
antagonist binding
muscarinic receptors

Calcium, 71
age differences
fixation effects
neuromuscular junctions
soleus muscles
synaptic vesicle density
Calcium-dependent processes, 329
aging
calcium homeostasis
ion movement deficits
nervous system
Calcium homeostasis, 329
aging
calcium-dependent processes
ion movement deficits
nervous system
Calmodulin, 131
age differences
compartmentalization
heterogeneity
tubulin
Capillary morphometry, 271
age differences
senescent brain
Catecholamine levels, 233
age differences
dopamine release
in vitro
norepinephrine release
Catecholaminergic mechanisms, 441
age differences
functional recovery
GABA-mediated hemiplegia
lesions, motor cortex
Cats, 253
age differences
habituation
locomotor activity
spatial reversal learning
Caudate nucleus, 45
aging
brain, monkey
caudate putamen
dopamine receptors
^{3}H-spiroperidol binding
Caudate putamen, 45
aging
brain, monkey
caudate nucleus
dopamine receptors
^{3}H-spiroperidol binding
Cell-free system, 27
age-invariance
brain protein synthesis
initiation
Central neurotransmitter responses, 417
aging
cholinergic activity
strain differences
Cerebral blood flow
AF64A, 139
age differences, 55, 139
cerebral oxygen consumption, 55, 139
cholinergic hypofunction, 139
rats, male, 55
Cerebral cortex
acetylcholine release, 403
age differences, 403
aging, 7
area 17, 7
dietary restriction, 7
longevity, 7
neuronal loss, 7
phosphatidylserine, 403
Cerebral cortex, postcentral, 203
age differences
aging
brains, human
cerebral cortex, precentral
quantitative study
synaptic changes
ultrastructural study
Cerebral cortex, precentral, 203
age differences
aging
brains, human
cerebral cortex, postcentral
quantitative study
synaptic changes
ultrastructural study
Cerebral lipid metabolism, 457
age differences
fatty acid loss
glucose deprivation
phospholipid derangement
Cerebral oxygen consumption
AF64A, 139
age differences, 55, 139
cerebral blood flow, 55, 139
cholinergic hypofunction, 139
rats, male, 55

albumin
Alzheimer's disease
blood-brain barrier
human studies
immunoglobulin G
Chickens, 123
acetylcholine
age differences
cholinergic synapses
iris
Cholinergic activity, 417
aging
central neurotransmitter responses
strain differences
Cholinergic hypofunction, 139
AF64A
age differences
cerebral blood flow
cerebral oxygen consumption
Cholinergic synapses, 123
acetylcholine
age differences
chickens
iris
Chronic stress, 449
age differences
inescapable shock
neural retina
sex differences
Classical conditioning, 101
age differences
hippocampal unit activity
memory
rabbits
Compartmentalization, 131
age differences
calmodulin
heterogeneity
tubulin
Cyclic nucleotide metabolism, 473
age differences
morphine

Degeneration, 35
aging
delayed alternation
hippocampus
learning and memory
spatial deficit
Delayed alternation, 35
aging
degeneration
hippocampus
learning and memory
spatial deficit
Dendrites, 521
aging brain studies
Alzheimer's disease
neuron numbers
rodents/primates comparison
Dendritic spine loss, 501
age differences
brain phosphatidylserine administration
hippocampus
11C-2-Deoxy-D-glucose, 319
age differences
aging
human studies
hypofrontal change
positron emission tomography
replication study
2-Deoxyglucose, 171
age differences
inferior colliculus
pure tone evoked metabolic responses
resting metabolic responses
senescence
Dietary restriction, 7
aging
area 17
cerebral cortex
longevity
neuronal loss
Dopamine, 195
aging
brain, human
dopamine receptors
fluphenazine
Dopamine levels, 67
age differences
age-related tumors
female mice
lactotrophic adenomas
pituitary tumors
Dopamine receptors
aging, 45, 195
brain, human, 195
brain, monkey, 45
caudate nucleus, 45
caudate putamen, 45
dopamine, 195
fluphenazine, 195
^{3}H-spiroperidol binding, 45
D-1 dopamine receptors, 51
aging
receptor density

³H-SCH 23390
striatum
Dopamine release, 233
age differences
catecholamine levels
in vitro
norepinephrine release
Dopaminergic system, 61
aging
metabolic responses
monoamine metabolism
reserpine
serotonergic system
Dose differences, 167
age differences
analgesia
beta-endorphin
footshock
jump test
pain
Drug
AF64A, 139
almitrine, 457
amphetamine, 441
apomorphine, 153, 441
11C-2-deoxy-D-glucose, 319
beta-endorphin, 167
ethanol, 241
fluphenazine, 195
haloperidol, 441

brains, human
cerebral cortex, postcentral
cerebral cortex, precentral
synaptic changes
ultrastructural study
Quinuclidinylbenzilate, 517
aging
muscarinic binding
selective influence
strain differences

Rabbits, 101
age differences
classical conditioning
hippocampal unit activity
memory
Radial maze performance, 325
age differences
retention intervals
spatial memory
Rats, Fischer 344, 511
aging
blood vessels
norepinephrine content
Rats, male, 55
age differences
cerebral blood flow
cerebral oxygen consumption
Receptor density, 51
aging
D-1 dopamine receptors
^{3}H-SCH 23390
striatum
Recognition memory, 435
age differences
animal models
monkey, rhesus
Regional cerebral blood flow, 409
aging
environmental enrichment
learning behavior
Replication study, 319
age differences
aging
11C-2-deoxy-D-glucose
human studies
hypofrontal change
positron emission tomography
Reserpine, 61
aging
dopaminergic system
metabolic responses
monoamine metabolism
serotonergic system
Resting metabolic responses, 171
age differences
2-deoxyglucose
inferior colliculus
pure tone evoked metabolic responses
senescence
Retention intervals, 325
age differences
radial maze performance
spatial memory
Rodents/primates comparison, 521
aging brain studies
Alzheimer's disease
dendrites
neuron numbers

^{3}H-SCH 23390, 51
aging
D-1 dopamine receptors
receptor density
striatum
Selective alteration, 147
age differences
K^{+} stimulation
neurotransmitter release
Selective influence, 517
aging
muscarinic binding
quinuclidinylbenzilate
strain differences
Senescence, 171
age differences
2-deoxyglucose
inferior colliculus
pure tone evoked metabolic responses
resting metabolic responses
Senescent brain, 271
age differences
capillary morphometry
Senile dementia, 219
glutamate neurons
postmortem delay
sodium-dependent glutamate binding
Senile plaques, 291
Alzheimer's disease
brain, aged monkey
Serotonergic system, 61
aging
dopaminergic system
metabolic responses
monoamine metabolism
reserpine
Sex differences, 449
age differences
chronic stress
inescapable shock
neural retina
Sexual behavior, 153
age differences
apomorphine
Sexual function, 465
fertility
fetal hypothalamic transplant
impotence
male rats, aged
Short-term memory, 393
age differences
exploration
locomotor activity
spontaneous alternation
Sodium-dependent glutamate binding, 219
glutamate neurons
postmortem delay
senile dementia
Soleus muscles, 71
age differences
calcium
fixation effects
neuromuscular junctions
synaptic vesicle density
Spatial deficit, 35
aging
degeneration
delayed alternation
hippocampus
learning and memory
Spatial memory, 325
age differences
radial maze performance
retention intervals
Spatial reversal learning, 253
age differences
cats
habituation
locomotor activity
^{3}H-Spiroperidol binding, 45
aging
brain, monkey
caudate nucleus
caudate putamen
dopamine receptors

Spleen, 159
  age differences
  immune responsiveness
  noradrenergic innervation
Spontaneous alternation, 393
  age differences
  exploration
  locomotor activity
  short-term memory
Strain differences
  aging, 417, 517
  central neurotransmitter responses, 417
  cholinergic activity, 417
  muscarinic binding, 517
  quinuclidinylbenzilate, 517
  selective influence, 517
Striatum, 51
  aging
